OKALOOSA COUNTY SALTWATER BEACH MONITORING RESULTS FOR July 13, 2015

OKALOOSA COUNTY – The Florida Department of Health in Okaloosa County (DOH-Okaloosa) conducts weekly saltwater beach water quality monitoring at 13 sites through the Healthy Beaches Monitoring Program. The water samples are analyzed for enteric bacteria (enterococci) that normally inhabit the intestinal tract of humans and animals and which may cause human disease, infections, or rashes. The presence of enteric bacteria is an indication of fecal pollution, which may come from stormwater runoff, pets and wildlife, and human sewage.

The following water quality classifications are used by the Florida Department of Health and are based upon the United States Environmental Protection Agency's (EPA's) recommended standard for enterococci. The classification standard is as follows:

GOOD:	0 – 35 colony forming units (CFU) per 100 milliliters (ml) of marine water
MODERATE:	36 – 104 CFU per 100 ml of marine water
POOR	≥ 105 CFU per 100 ml of marine water.

Advisories have been issued for **Marler Park, Wayside Park, and Gulf Islands National Seashore** of Okaloosa Island and **Lincoln Park** of Valparaiso based on the enterococci standards recommended by the EPA. This should be considered a potential health risk to the bathing public.
